

AMENDMENTS TO THE ABSTRACT

Please replace the original Abstract of the Disclosure with the Abstract of the Disclosure that appears on a separate sheet attached to the present amendment. The amendments to the abstract of the disclosure are as follows:

Abstract of the Disclosure

~~The present invention provides an~~ An ~~evacuatable valve which~~ does not need a separate member such as a covering for closing an air-through portion and has a small portion that projects therefrom. A valve body [[5]] in the evacuable valve can securely contact the valve body contacting portion [[32a]] and close an air-through portion [[33]] where the valve body [[5]] covers, thereby keeping the evacuated state for a long period of time. A valve seat portion [[32]] of the back face of an evacuable valve can at least partly rest in the depressed area [[7]] of the front face of the other valve, thereby being able to pile up the evacuable valves [[1]]. In the production process of evacuable bags that are provided with the evacuable valve, piling and storage of the evacuable valves do not need excessive space and much effort.
